

What did you learn that you will tell your friends/neighbors/coworkers at home?	What will you do differently or try as a result of this meeting?	What questions did you have that weren't addressed?	How can partners (organizations/agencies/ extension) continue to support All Lands Partnerships? What do you need from us?	What follow-up actions and activities would you like to see from this meeting?
Lots of valuable know how, know who can be reached about future challenges we may collectively attack	Work to increase awareness of collaborative options.	Biomass utilization strategies, successes, challenges.	More information on making the grant application process seamless and more easy to obtain landowner funding	Circulate list of attendees; offer 'mixers' and additional subject matter on monthly or quarterly basis
There are many efforts in S. Oregon to restore forests in a collaborative manner.	Look for more opportunities to encourage agencies and managers to work in a more coordinated manner.	Smoke management challenges.	Add the emotional component of benefits and effects of projects	A program that focuses on 'probably future climate conditions and forest management for health, resiliency, and carbon storage'
The connection between forest lands and water.	Reassess OIT programs and structure. Inform strategic planning to provide resources/capacity for local All Lands partnerships.	Cooperatives to bundle purchasing power for goals and services; or to seek technologies and markets for goals and services resulting from these properties.	Continue to tell stories: the risks and problems and what is being done by whom, and benefits.	Ask participants to bring their own cutlery, plates, etc. Please don't serve bottled water!
I learned a lot about the programs available locally to address forest challenges from history and to address climate issues.	It is just as important to work with leadership in your agency as it is with individual landowners.	How we manage for future conditions that will render unviable many current critical species.	Figure out ways to involve students and create pathways from K-12 to university to get jobs.	Can we get a copy of the slides shown today?
Working with partners is a necessity to increase natural resource management and impact social, economic, and ecological approaches.	Encourage local landowners to apply for funds. Do what I can to facilitate the conversation in my local area.	Forestry concerns; soil improvement; saw mill infrastructure; road use tariffs; logger attrition; lack of reprod acres	Rural America needs to get back to work! Help them create economic stability by going after the invasive western juniper. It needs aggressive management.	Keep up the momentum.

What did you learn that you will tell your friends/neighbors/coworkers at home?	What will you do differently or try as a result of this meeting?	What questions did you have that weren't addressed?	How can partners (organizations/agencies/extension) continue to support All Lands Partnerships? What do you need from us?	What follow-up actions and activities would you like to see from this meeting?
There is a lot of knowledge out there in partnership format.	Reach out to a wider variety of stakeholders for our next deals.	What made the lunch?	Encourage landowners to take advantage of local funding opportunities (EQIP, EFRP, etc)	Contact partnerships and see what their needs are
I should leverage cooperatives for social license to be more effective	Acknowledge better the diversity of ownership and objectives in promoting carbon sequestration and storage.	None - probably don't know enough yet.	Access to: know-how, know-who, and capital	Work with partners and collaboratives
Amazing to hear about progression from Smokey the Bear culture to having portion of water bill go toward forest resilience. We have come along way!	To look into the possibility of Title 3 funding to support our projects.	Restoration by products sold to pay for restoration treatments	A program that focuses on 'probable future climate conditions and forest management for health resiliency and carbon storage'	Field tours of project areas
Lots of good projects going on throughout the region.	To develop a website where a landowner can go to access their forest health or wildfire risk data for their property.	How to find \$ and hours capacity for outreach that is less glamorous than boots on the ground large projects, but are essential towards private LO engagement	Continuity	The results of this meeting should be compiled and made available
The 8 Steps for All Lands project development.	Work with partners - I'm not an island to myself.	How are the N Warner and Chiloquin projects going to guarantee the private land projects stay maintained?	Missioning and visioning; strategic planning; training; budget and policy; evaluate based on partnerships/collaboration; promote based on partnership; include and engage All Lands stakeholders in organizational oversight	Recommendations to amend or change current agency policies should be presented to those agencies.

What did you learn that you will tell your friends/neighbors/coworkers at home?	What will you do differently or try as a result of this meeting?	What questions did you have that weren't addressed?	How can partners (organizations/agencies/extension) continue to support All Lands Partnerships? What do you need from us?	What follow-up actions and activities would you like to see from this meeting?
<a href="http://knowyourforest.org">knowyourforest.org</a>	More social media outreach that connects public to public land projects.	How we can better understand environmental justice and how it relates to our project	Capacity - both through funding to collaboratives and through upper level support for staff to work on these efforts.	Open this up to NE California and communicate with like-minded stewards just south of the stateline. Interstate deer herd is an economic stimulus.
How working with ODF is so different than Calfire	Create a website and social presence priority to fund and staff this a priority. Important to sell and tell your story.	Great job!!!!!! But how do I encourage my local partners to start a cross-boundary collaborative?	Engage and promote mill and contractor capacity; have them at the table. Workforce capacity	Provide detailed summary of today's presentations for participants (more than just powerpoints). Keep us updated on these projects! offer group to sign up for mailing lists if possible.
Reinforced the importance of targeted marketing (TELE) - don't be afraid to start with 'Strict TELE' and adapt (or stray?) as needed/called for to make your message effective.	Look to put landowner online interface for information about their property.	Is there a similar effort in NE California? State land boundaries are invisible and could leverage state and private funding.	NRCS needs help with NEPA. Is there anyone that can provide support?	Curricula for training/educational programs
Collaboration! It's critical.	Keep an eye out for cross-boundary opportunities in my area. Also work with our local forest collaborative to see if they can start to consider doing cross-boundary work (broaden focus from just public land restoration).		In perspective areas continue to bring in other key players into planning projects, including internal agencies. Example - add timber staff to plans	Would love list of attendees with contact information. We try to connect with as many folks as possible but it's hard to talk with everyone.

What did you learn that you will tell your friends/neighbors/coworkers at home?	What will you do differently or try as a result of this meeting?	What questions did you have that weren't addressed?	How can partners (organizations/agencies/extension) continue to support All Lands Partnerships? What do you need from us?	What follow-up actions and activities would you like to see from this meeting?
Lots of opportunity for resource help	Share opportunities to cooperate with neighbors on All Land type projects.		Better advertising and support through education	Intentionally promote climate-smart conservation principles. Definition/principles available in a publication titled "climate-smart conservation guide". Address global warming directly. Stop dodging the concept by saying that we do by the actions taken to promote forest health.
There is eminent concern to reduce fire severity and extent.			To advocate for working with all key agencies to institutionalize the concept of cross-boundary restoration and support with capacity.	
There is a need and place for OIT to help build local capacity and provide technical assistance to meet science and monitoring needs and release bottlenecks. This will help grow and evolve OIT programs in return. Win-win.			Keep in the conversation. These projects juggle a lot of partnerships so if you haven't heard from a project manager in a while - reach out!
